

Centralized multi-entity management in a single database.

Multi-Entity Management (MEM) for Microsoft Dynamics GP streamlines multi-company complexities with tools for master record consolidation, intercompany balancing, and robust reporting. Fully embedded in Dynamics GP, MEM automates transactions, allocations, and financial processes to drive scalable growth.

Simplify intercompany transactions with automated balance tracking and streamlined workflows across Business Central modules.

Real-time consolidated reporting lets you run Business Central reports for individual or multiple entities with up-to-date data.

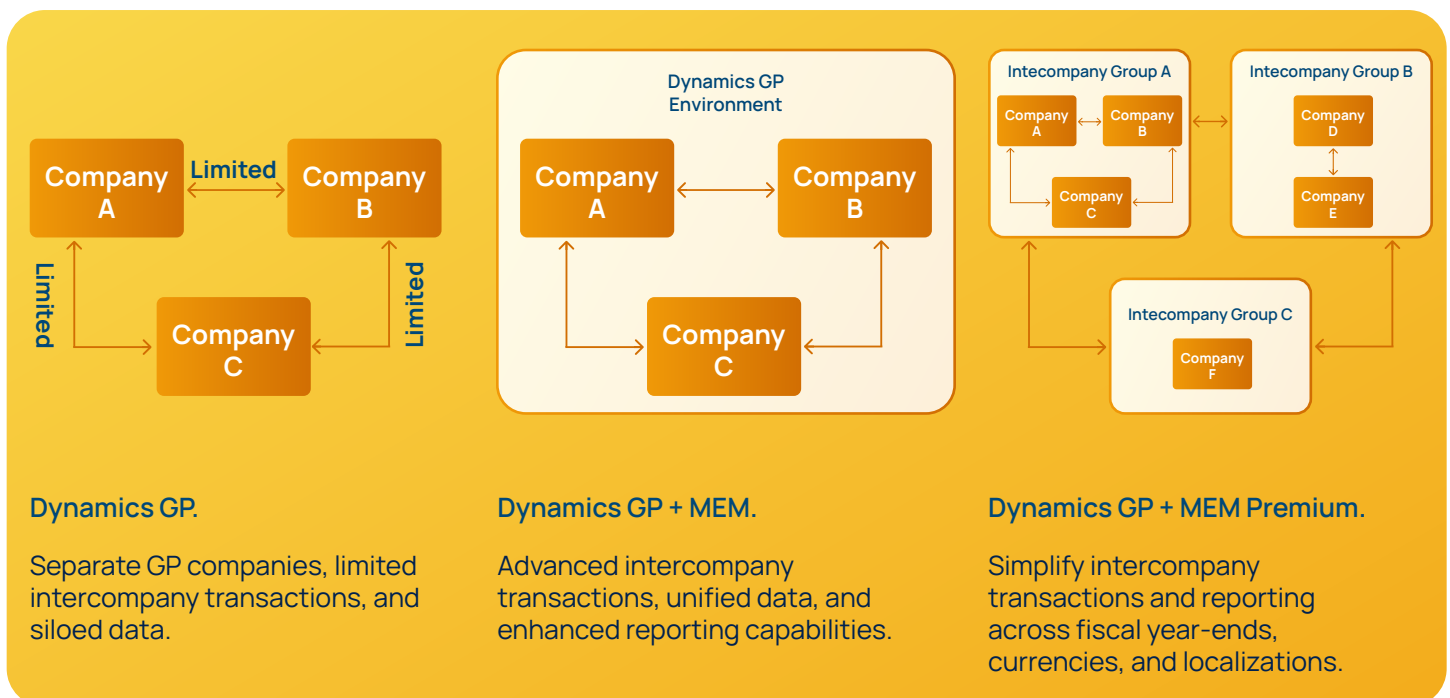

Add new companies with ease. Quickly start transactions and reporting for new operations or acquisitions.

Define a single set of records for entities, customers, vendors and more. Get real-time updates—no duplication or syncing required.

How MEM Works in Dynamics GP.

Dynamics GP.

Separate GP companies, limited intercompany transactions, and siloed data.

Dynamics GP + MEM.

Advanced intercompany transactions, unified data, and enhanced reporting capabilities.

Dynamics GP + MEM Premium.

Simplify intercompany transactions and reporting across fiscal year-ends, currencies, and localizations.

Multi-Entity Management: Simplifying complex operations.

This visual highlights how Binary Stream's Multi-Entity Management (MEM) solution is embedded within Microsoft GP to unify data, streamline intercompany transactions, and enhance security across entities.

With features like real-time reporting, functional currency support, and centralized master records, MEM empowers organizations to efficiently manage multiple entities while ensuring compliance and operational accuracy.
