

Enhance financial data accuracy and control with Dimension Manager.

Binary Stream's Dimension Manager expands the functionality of Microsoft Dynamics 365 Business Central by automating, correcting, and managing dimensions across financial transactions—without the need for manual reversals or re-posting.

This solution ensures reporting and compliance accuracy, and is ideal for finance teams looking to attach dimensions to existing data, correct past errors, and automate updates. Dimension Manager works seamlessly with Multi-Entity Management (MEM), preventing unwanted changes to MEM Global Dimensions while improving control over financial data.

Key benefits.

Easily correct and modify dimensions on posted transactions.

- Update multiple dimension values on posted documents in one action.
- Modify dimensions on individual lines of posted documents

Streamline cash collection and improve team efficiency.

- Schedule batch updates to correct dimension errors across large datasets.
- Attach newly created dimensions to historical data for accurate reporting.

Gail full visibility and control over receivables.

- Prevent dimension edits in closed periods with posting date restrictions.
- Full audit trail of modifications to ensure transparency and accountability.

Seamlessly embedded within Dynamics 365 Business Central.

- Update customer and vendor master dimensions and push changes across all open and posted entries.
- Automatically block changes to MEM Global Dimensions to maintain compliance.

How it works in Dynamics 365 Business Central.

1

Identify and filter.

Find transactions needing dimension updates across ledgers. 2

Modify and apply.

Make bulk or individual changes, ensuring audit control and compliance.

3

Automate updates.

Schedule recurring batch changes for large datasets. 4

Report with accuracy.

Ensure all financial reports reflect the correct dimension values.

Why choose Dimension Manager?

Fix posting errors without reversing transactions.

Save time and prevent disruptions.

Works with any ledger entries.

G/L, customer ledger, vendor ledger, and more.

Optimize reporting and financial insights.

Ensure accurate and meaningful dimension-based reporting.

Prevents unauthorized changes.

Apply security measures to control dimension modifications.
